JIANG NAN 江南	**Food Safety Policy**	Document No.:	IKQAP#001
		Revision No.	3
	Imperial Kitchen Group Inc.,	Effective Date:	June 28, 2026

1. Policy Statement

Imperial Kitchen Group Inc., is committed to providing safe, wholesome, and high-quality food to our guests. We recognize that food safety is a shared responsibility and a fundamental pillar of our operations. We pledge to operate in full compliance with the Food Safety Act of 2013 (RA 10611) and all applicable local sanitary codes to protect public health and maintain the trust of the Filipino community.

2. Scope

This policy applies to all aspects of our food chain, including procurement, receiving, storage, preparation, and service. It is binding for all employees (full-time and contractual), management, third-party contractors, and suppliers.

3. Responsibilities

3.1. All Employee, Contractor, & Food Handler

Shall possess a valid Health Certificate issued by their local City or Municipal Health Office, ensuring they have cleared all mandatory medical screenings required by law. Under the mandatory Employee Health and Exclusion Policy (*IKQAP#005*), any individual exhibiting symptoms of foodborne illness—such as diarrhea, vomiting, fever, or visible skin infections—must be immediately removed from food-handling duties to prevent potential outbreaks. Beyond health screenings, all employees must rigorously follow the Personnel Hygiene SOP *(IKQAP#012)* by maintaining consistent handwashing, wearing clean uniforms, and properly utilizing hair restraints to establish a behavioral barrier against contamination. Finally, employees are expected to actively practice a continuous "Clean as you Go" (CLAYGO) workflow, treating sanitation as an integrated part of their active shift rather than an end-of-day task.

3.2. Supply Chain Management (SCM)

Shall be tasked with ensuring safety and traceability from the very beginning of the food network. They must exclusively source raw materials, meat, and poultry from National Meat Inspection Service (NMIS) accredited facilities and FDA-registered suppliers. Upon arrival at the facility or store, receiving employees must inspect all deliveries for quality and strict temperature compliance to verify that the cold chain has not been broken. To secure the system against potential hazards, supply chain teams must maintain meticulous records of all ingredients used. This comprehensive documentation ensures that in the event of an official food safety alert from the Department of Health (DOH) or the Department of Agriculture (DA), the company can quickly trace and withdraw any affected products from circulation.

3.3. Restaurant & Area Manager

Shall be responsible for holding direct, on-site accountability for daily food safety and store maintenance. They enforce temperature controls by verifying daily refrigeration logs and monitoring the one-hour Danger Zone threshold. Additionally, they oversee daily sanitation schedules, maintain pest exclusion barriers, ensure proper chemical storage, and train staff on safety protocols. The Restaurant Manager is empowered to take immediate corrective actions, such as discarding compromised inventory or requesting emergency repairs, whenever a breach occurs.While the Area Manager provides high-level oversight, compliance auditing, and strategic support across the district. They conduct unannounced regional audits of temperature logs, facility conditions, and IPM documentation, holding Restaurant Managers accountable for any operational lapses.

3.4. Quality Assurance (QA)

Shall be responsible for the independent oversight, verification, and continuous improvement of the company's food safety system. Acting as the primary custodian of compliance, QA are tasked with maintaining, reviewing, and updating the Food Safety Policy and its related Standard Operating Procedures (SOPs) to ensure strict, ongoing alignment with the Food Safety Act of 2013 (RA 10611). To verify that these standards are actively upheld across the entire food chain , the team plans, coordinates, and executes the mandated internal food safety audits across all store locations at least once every quarter. Following these assessments, QA monitors and tracks the implementation of mandatory corrective actions arising from audit failures, regulatory inspections, or localized food safety breaches. Furthermore, the QA will spearhead thorough incident investigations into any reported guest complaints regarding foodborne illness or official health alerts, coordinating seamlessly with the Supply Chain and Operations to trace and withdraw compromised inventory if necessary.

3.5. Human Resources (HR)

Shall be responsible to enforce strict compliance regarding employee health documentation and administers the company's formal disciplinary framework. HR is directly responsible for verifying that every hired restaurant employee and contractual food handler possesses a valid Health Certificate issued by the local city or Municipal Health Office before they are deployed to any store. The HR must maintain secure, updated records of these mandatory medical screenings and collaborate closely with store management to manage employees under the Employee Health and Exclusion policy (IKQAP#005) when symptoms of foodborne illness arise. Additionally, HR acts as the final authority on policy enforcement; they oversee and execute standardized disciplinary procedures, up to and including the immediate termination of employment or third-party contracts, for any individual whose actions compromise guest safety or breach established sanitary protocols.

3.6. Learning & Development (L&D)

Shall be responsible for building a robust, company-wide food safety culture by equipping all employees with necessary compliance knowledge. L&D designs, schedules, and executes comprehensive food safety onboarding and training curricula required for all full-time or contractual employees across the food network. In close partnership with the QA, L&D trains store employees on specialized operational protocols, explicitly focusing on the Personnel Hygiene SOP, critical temperature logs, the one-hour Danger Zone threshold , and the continuous "Clean as you Go" (CLAYGO) workflow. To maintain a high baseline of operational awareness, the L&D tracks mandatory annual retraining programs and develops targeted intervention courses for specific stores demonstrating systemic environmental or sanitation risks during quarterly audits.

4. Principles

4.1. Safe Sourcing

The company shall only procure raw materials, meat, and poultry from National Meat Inspection Service (NMIS) accredited facilities and FDA-registered suppliers. Also, all deliveries must be inspected for quality and temperature upon arrival to ensure the cold chain has not been broken.

4.2. Personnel Health and Hygiene

The company shall maintain high standards of personnel health and hygiene as a non-negotiable prerequisite for our operations, anchored by strict compliance with local government regulations. Every employee must be required to possess a valid Health Certificate from the local City or Municipal Health Office, ensuring they have undergone the necessary medical screenings required by Philippine law. Beyond documentation, the company shall enforce a mandatory Employee Health and Exclusion policy where any employee exhibiting symptoms of foodborne illness—such as diarrhea, vomiting, fever, or visible skin infections—is immediately removed from food-handling duties to prevent potential outbreaks. These measures shall be supported by a rigorous Personnel Hygiene SOP that mandates consistent handwashing, the use of clean uniforms,

and the proper application of hair restraints, creating a ‘comprehensive behavioral barrier against food contamination.

4.3. Temperature and Time Control

The company shall maintain strict adherence to temperature and time controls as a critical defense against accelerated microbial growth. The facility and stores must operate under a zero-tolerance policy regarding the Temperature Danger Zone, mandating that high-risk foods never remain between 5°C and 60°C for a cumulative period exceeding one hour. To maintain this safety margin, cold storage units are strictly regulated to operate at 4°C or below. This rigorous procedure ensures that the cold chain remains intact from receiving to service, effectively stopping the environmental risks inherent in a tropical climate.

4.4. Environmental Sanitation and Pest Control

The company shall remain committed to environmental hygiene, centered on a proactive "Clean as you Go" (CLAYGO) culture, which ensures that sanitation is an integrated, continuous part of the workflow rather than an end-of-day task. This systematic approach shall be reinforced by a rigorous Integrated Pest Management (IPM) program specifically designed to combat common urban vectors—such as rodents, cockroaches, and flies—that thrive in tropical environments. By focusing on exclusion, habitat elimination, and the exclusive use of FDA-approved food-grade chemicals, it mitigates the risk of both biological contamination and accidental chemical exposure. This dual-layered strategy not only ensures a pristine service environment but also creates a structural barrier against the entry and proliferation of pests, maintaining the integrity of the entire food safety ecosystem.

4.5. Traceability and Recall

The company shall maintain records of all ingredients used to ensure that, in the event of a food safety alert from the Department of the Health (DOH) and Department of Agriculture (DA), it can quickly trace and withdraw affected products.

5. Management Responsibility

The management team is responsible for providing the necessary resources, including training, PPE, and sanitized facilities. The company is committed to conducting at least one Internal Food Safety Audit in each store per quarter to ensure these standards are upheld.

6. Non-Compliance

Failure to adhere to this Food Safety Policy undermines our commitment to quest safety and may result in disciplinary action, up to and including termination of employment or contact.

6.1 Minor Non-Compliance (Low-Risk / Isolated Incidents)

For isolated, low-risk infractions—such as a single instance of improper personal protective equipment (PPE) or a minor delay in logging temperatures—the immediate corrective action requires “on-the-spot rectification and informal coaching”. The employee or contractor must correct the behavior immediately (e.g., putting on a hairnet or washing hands), and the manager will provide a verbal reminder of the policy. The primary focus of this category is supportive education and reinforcing standard operating procedures in a constructive manner, without issuing formal disciplinary marks.

6.2 Major Non-Compliance (Repeated or High-Risk Deviations

For repeated minor infractions or single incidents that pose a direct, high-risk hazard—such as failing to monitor Critical Control Points (CCPs) or neglecting cross-contamination protocols—the corrective action involves “a documented verbal warning and targeted refresher training”. Management will closely monitor the employees practices and guide them through a review of relevant food safety modules to ensure they fully grasp the protocols. Rather than immediate

removal or threats to employment, this category focuses on increased supervision and proactive coaching to correct the behavior.

6.3 Critical Non-Compliance (Gross Negligence or Immediate Safety Threats)

For severe, willful, or hazardous violations—such as intentionally falsifying safety logs, serving known contaminated food, or exhibiting gross hygiene failures—the corrective action dictates an immediate “formal written warning, temporary reassignment, and mandatory intensive retraining”. Any compromised food product must be immediately isolated and discarded to protect guest safety. The individual will be temporarily removed from food-handling duties to complete a rigorous safety re-certification under direct management review, utilizing a progressive discipline approach where termination is reserved as a final resort if the behavior cannot be safely corrected.

7. Change History

Revision No.:	Revision Date:	Author & Position:	Purpose of Revision
0	February 11, 2026	Marielle Louise Macabale**, QA Specialist**	Originator
1	March 05, 2026	Marielle Louise Macabale**, QA Specialist**	• Change the addressing of personnel; staff members to employees • Added additional signatory; L&D Manager
2	May 25,2026	Celine Joy Sanchez**, QA Specialist**	• Added responsibilities
3	June 1,2026	Celine Joy Sanchez**, QA Specialist**	• Revised the non-compliance
