JIANG NAN 江南	**Allergen Management Policy**	Document No.:	IKQAP#004
		Revision No.	1
	Imperial Kitchen Group Inc.,	Effective Date:	June 28, 2026

1. Policy Statement

Imperial Kitchen Group Inc., is committed to the safety of our guests with food allergies and dietary restrictions. The company recognizes that food allergies are a serious medical condition. It is the company's policy to treat every allergen inquiry with the utmost seriousness, transparency, and care to ensure that the food we serve is safe for the specific guest requesting it.

2. Scope

This policy covers the entire flow of food: Menu Planning, Purchasing, Storage, Preparation, Service, and Emergency Response. It applies to all Kitchen (BOH) and Service (FOH) employees.

3. Responsibilities

3.1. Quality Assurance (QA)

Shall serves as the policy's author, originator, and continuous reviewer, ensuring that the company's guidelines stay aligned with major allergens recognized by regulatory authorities like the FDA and CODEX.

3.2. Supply Chain Management

Shall be responsible for reviewing the document and enforcing supplier standards, ensuring that vendor practices do not compromise safety.

3.3. Human Resources (HR)

Shall ensure the policy integrates seamlessly across various operational sectors, including kitchen employees, service employees, and management. To solidify this framework, the HR Manager is responsible for ensuring that all allergen policy standards are thoroughly incorporated into employee onboarding, continuous training programs, and corporate disciplinary or accountability frameworks.

3.4. Learning & Development (L&D)

Shall be responsible for creating the comprehensive Allergen Awareness Training curriculum. The L&D ensures that all relevant employees undergo mandatory training during induction and complete refresher courses on an annual basis thereafter.

3.5. Restaurant and Area Manager

Shall be responsible for overseeing operational employees and ensuring that all daily, hands-on tasks necessary to prevent allergen cross-contact are executed perfectly from delivery to service.In the Back of House, managers are responsible for auditing the kitchen employees storage and preparation practices. This includes verifying that allergenic ingredients are kept in sealed, clearly labeled containers, stored below non-allergenic items to prevent accidental spillage, and that any decanted ingredients explicitly highlight allergens in bold text. Furthermore, managers must ensure kitchen employees strictly mitigate cross-contact by utilizing dedicated purple allergy tools or sanitized stainless steel while meticulously following the mandatory preparation sequence: washing hands, putting on fresh gloves, cleaning and sanitizing work surfaces, using a fresh cutting board and knife, and verifying the ingredient labels of all sauces or garnishes. On the front end, managers must hold service employees (Front of House) accountable for proactively asking guests about dietary restrictions before taking orders and immediately recording this data into the Point of Sale (POS) system so specific allergies are flagged in bold on kitchen tickets. Finally, to guarantee a secure chain of custody, the Restaurant Manager alongside the Shift Manager must personally deliver the final allergy-safe meal to the guest separately from all other dishes.

3.6. Kitchen and Service Employees

Shall be responsible for executing daily allergen control protocols to eliminate cross-contact from delivery to service. Back of House (BOH) employees must store allergenic ingredients in sealed, labeled containers *below* non-allergens—with decanted items marked in bold—and utilize dedicated purple or stainless steel tools while strictly following a mandatory preparation sequence (washing hands, changing gloves, sanitizing workstations, using fresh boards, and verifying ingredient labels). Front of House (FOH) employees must proactively screen guests for dietary restrictions and log them into the POS to instantly flag the kitchen captain in bold. To maintain compliance, all personnel must complete annual Allergen Awareness Training to master the nine major allergens, symptom recognition, and the critical fact that cooking does not remove allergens. In a medical emergency, responding staff must immediately call emergency services, notify management, keep faint guests stationary, and secure the food plate for corporate investigation rather than discarding it.

3.7. Executive Leadership

Shall holds ultimate accountability for the overarching governance, compliance, and legal authorization of the Allergen Control Policy. Within this department, the President serves as the final approving authority, providing official sign-off and authorization while maintaining ultimate accountability for the policy's organization-wide implementation and legal execution. Supporting this governance framework, the Vice President conducts high-level strategic reviews to ensure all protocols align seamlessly with broader business goals and regulatory standards. Additionally, the Vice President evaluates the policy's systemic impact to guarantee that it remains operationally viable and strictly consistent across all regional and corporate locations.

4. Identification of Major Allergen

The employees must be trained to identify and handle the following Major Allergens commonly recognized by food safety authorities (FDA/ CODEX):

- Milk/Dairy
- Eggs
- Fish
- Crustacean Shellfish
- Tree Nuts
- Peanuts
- Wheat
- Soybeans
- Sesame

5. Operational Procedures

5.1. Purchasing and Receiving

- **Label Verification:** The receiving officer must check ingredient label for hidden allergens
- **Supplier Notification:** Suppliers must be notified in writing that substitutions are not allowed without prior approval, as a brand change may introduce a new allergen

5.2. Storage

- **Separation:** Allergenic ingredients must be stored in sealed, clearly labeled containers.
- **Placement:** Allergenic ingredients must be stored below non-allergenic items to prevent accidental spillage.
- **Labeling:** Any decanted ingredient (removed from original packaging) must be labeled with the product name and bold highlighting of any allergens present.

5.3. Preparation

- **Cross-Contact:** The employee must understand that cross-contact occurs when an allergen is transferred from a food or surface to another food. Cooking does not remove the allergen.
- **Allergy Kit:** When preparing a special order, the kitchen employee must use dedicated allergen tools (Color-coded Purple is the industry standard for allergen) or thoroughly washed and sanitized stainless steel.
- **Process:**
  - Wash hands and put on fresh gloves
  - Clean and sanitize the work surface
  - Use a fresh cutting board and knife
  - Verify the ingredient labels of sauces/garnishes used

5.4. Service- The servers must proactively inquire about dietary restrictions before taking any order. This information is then formalized through the Point of Sale (POS) system, ensuring that specific allergies (e.g., "**ALLERGY: SHELLFISH**") are clearly flagged in bold on kitchen tickets to alert kitchen employees/ kitchen captain immediately. To prevent cross-contact during transport, the final safety check requires the Shift Manager and Restaurant Manager to personally deliver the allergy-safe meal/items separately from other dishes, ensuring a secure chain of custody from the kitchen pass to the guest.

6. Training

All relevant employees are mandated to undergo comprehensive Allergen Awareness Training upon induction and on an annual basis thereafter. This curriculum is designed to equip employees with critical operational knowledge, specifically focusing on the ability to identify the clinical symptoms of an allergic reaction, distinguish the physiological differences between digestive intolerances and life-threatening immune system allergies. A training program shall be made by the Learning & Development Team.

7. Emergency Response (Anaphylaxis)

If a guest reports an allergic reaction (swelling, trouble breathing, hives):

- Call emergency services immediately
- Notify management
- Do not move the guest if they are fainting or dizzy
- Secure the food: Keep the plate of food for testing/investigation; Do not throw it away.

8. Change History

Revision No.:	Revision Date:	Author & Position:	Purpose of Revision
0	February 12, 2026	Marielle Louise Macabale**, QA Specialist**	Originator
1	March 05, 2026	Marielle Louise Macabale**, QA Specialist**	• Change the addressing of personnel; staff members to employees • Changed store manager to restaurant and/or shift manager • Added additional signatory; L&D Manager
2	May 25, 2026	Celine Joy Sanchez**, QA Specialist**	• Added Responsibilities
