JIANG NAN 江南	**Employee Health and Exclusion Policy**	Document No.:	IKQAP#005
		Revision No.	2
	Imperial Kitchen Group Inc.,	Effective Date:	June 28, 2026

1. Policy Statement

Imperial Kitchen Group Inc., prioritizes the health of our employees and the safety of our guests. Any employee who is ill or carrying a communicable disease that can be transmitted through food must be excluded or restricted from food-handling duties.

2. Scope

The scope of this policy ensures that all regular, contractual, and third-party employees, regardless of their role, must follow the health rules. It also covers the initial health screening, daily monitoring, mandatory exclusion, and clearance process.

3. Responsibilities

3.1. All Employees

Shall strictly follow all established health rules. To meet regulatory compliance under the Code on Sanitation of the Philippines (PD 856), every employee must maintain a valid Sanitary/Health Certificate issued by their local City or Municipal Health Office; this certificate must be renewed annually and kept on-site for potential inspections.

3.2. Restaurant and Shift Managers

Shall be responsible for executing daily health protocols on-site. Before any shift begins, the manager must conduct a proactive daily health check, which involves a visual inspection of employees for signs of illness or jaundice, alongside explicitly asking each employee. Managers are also responsible for assessing the severity of reported or observed illnesses to correctly apply management directives, ensuring that affected employees are either completely excluded from the premises or properly restricted from food, utensils, and cleaning equipment.

3.3. Human Resources (HR)

Shall be responsible for overseeing the employee relations and compliance aspects of the health policy. HR ensures that the reporting pipeline between employees and immediate supervisors functions effectively by auditing compliance with mandatory symptom reporting. While operational managers handle daily assessments, HR provides oversight on the proper execution of exclusion and restriction directives to guarantee a safe working environment. To protect employee rights and encourage transparency, HR enforces the "No-Penalty Reporting" standard, ensuring no worker is unfairly penalized for honestly reporting an illness. Conversely, HR is responsible for managing the disciplinary pipeline and executing strict corrective actions up to major disciplinary violations if an employee fails to report known communicable symptoms. Additionally, HR coordinates with the operations team to verify that all medical clearances and annual health certificates are structurally accounted for in compliance with national sanitation standards.

3.4. Quality Assurance (QA)

Shall be responsible for the formal preparation, review, and structural maintenance of the health policy. This involves updating document details—such as the document number, revision numbers, and effective dates—to keep company standards aligned with current operational practices. For instance, policy authors must update role scopes as organizational titles change, such as formally shifting terminology from "store manager" to "restaurant and/or shift manager," and ensure that all necessary cross-functional leaders sign off on policy changes.

4. Regulatory Compliance

In accordance with Code on Sanitation of the Philippines (PD 856):

- Every employee must possess a valid Sanitary/Health Certificate issued by the local City or Municipal Health Office
- Certificates must be renewed annually and kept on-site inspection

5. Mandatory Reporting Symptoms

Employees are obligated to report the their Immediate Supervisor (IS) if they are experiencing any of the following symptoms:

- Diarrhea
- Vomiting
- Jaundice (yellowing of eyes and skin)
- Sore Throat with Fever
- Infected wounds or boils (unless properly covered with waterproof bandage and glove)

6. Exclusion Vs. Restriction

Based on the severity of the illness, management shall apply one of the following:

- **Exclusion:** if an employee is vomiting, diarrhea, jaundice, or diagnosis of a “Big 5” pathogen *(Salmonella, Shigella, E. Coli, Hepatitis A, Norovirus),* they must not enter the premises. They must stay at home until symptoms subside.
- **Restriction:** if an employee has sore throat, fever, or persistent sneezing/coughing, they may work but cannot handle food, cleaning equipment, or sanitized utensils.

7. Fit-to-Work Criteria

To ensure the risk has passed, employees may only return to food-handling duties if:

- They have been asymptomatic (symptom free) for at least 24 to 48 hours without the use of medication
- In cases of Jaundice or confirmed pathogens, a Medical Clearance from a licensed physician (and/or the City Health Office) is mandatory
- Infected wounds are completely healed or can be securely covered to prevent leakage

8. Management Responsibility

- **Daily Health Check:** Before shift, the Restaurant Manager must conduct a visual health check (looking for signs of illness/jaundice) and ask “Are you feeling well today?”
- **No-Penalty Reporting:** To encourage honesty, employees will not be unfairly penalized for reporting illness, however, failure to report known symptoms is a major disciplinary violation
- **Documentation:** All reports of illness and subsequent clearances must be recorded in the Employee illness log

9. Change History

Revision No.:	Revision Date:	Author & Position:	Purpose of Revision
0	February 13, 2026	Marielle Louise Macabale**, QA Specialist**	Originator
