JIANG NAN 江南	**Chemical Storage and Handling Policy**	Document No.:	IKQAP#007
		Revision No.	2
	Imperial Kitchen Group Inc.,	Effective Date:	June 28, 2026

1. Policy Statement

Imperial Kitchen Group Inc., is committed to preventing chemical cross-contamination. All chemicals used for cleaning, sanitizing, and maintenance must be approved for food-service environments, stored securely, and handled by trained personnel to ensure the safety of both the staff member and our guests.

2. Scope

The scope of this policy is designed to be all-encompassing, ensuring that every hazardous substance within the facility—regardless of its specific utility—is strictly controlled to prevent accidental contamination. This includes daily sanitation chemicals such as detergents, heavy-duty degreasers, and floor cleaners, as well as the sanitizers and disinfectants vital for microbial management. Furthermore, it extends to high-risk industrial substances, including machine lubricants, catering fuels, and specialized pest control chemicals, which are subject to even more stringent storage protocols or managed exclusively by the Pest Control Operator (PCO).

3. Responsibilities

3.1. Quality Assurance (QA)

Shall be primarily responsible for document control, regulatory alignment, and establishing safety benchmarks. The QA serves as the policy's primary author and originator, managing all official versions and documentation updates. Operationally, the QA is responsible for ensuring that all chemicals used for cleaning, sanitizing, and maintenance purposes across the facility are strictly approved for food-service environments to actively prevent chemical cross-contamination.

3.2. Supply Chain Management (SCM)

Shall be responsible for logistical oversight, chemical inventory categorization, and physical safety infrastructure. The SCM department ensures that the policy's comprehensive scope is applied to all incoming hazardous substances, effectively tracking everything from daily sanitation chemicals (detergents, heavy-duty degreasers, floor cleaners) to specialized disinfectants and high-risk industrial substances (machine lubricants and catering fuels). Logistically, their role involves managing the safe procurement and distribution of these items, ensuring that proper storage environments—such as dedicated chemical cabinets, lower shelving configurations, and secondary containment spill trays—are physically provisioned and maintained.

3.3. Learning & Development (L&D)

Shall be responsible for the educational framework, workforce training, and safety competence of the facility's personnel. The L&D ensures that the technical mandates of the policy are successfully translated into structured training protocols so that employees can execute safety standards effectively on the floor. Their responsibility is to guarantee that only trained, authorized personnel are permitted to handle high-strength chemicals or manage restricted access areas.

3.4. Back of House (BOH) Employees

Shall be directly handled food-surface sanitizers and kitchen line cleaning supplies. Chefs and cooks are responsible for maintaining strict physical separation by ensuring that line sanitizers and surface sprays are never placed above, next to, or under food preparation tables, food packaging, or active food-contact surfaces. They must accurately dilute their daily sanitizers and disinfectants used for microbial management , wearing the appropriate PPE during line breakdown or deep cleaning. Culinary staff must be highly vigilant regarding secondary labeling on spray

bottles used on the line and enforce the rule that no empty food containers are ever repurposed to hold kitchen chemicals. They also manage personal items, keeping their own medicines and hygiene products strictly locked in employee lockers away from the kitchen floor. Crucially, if any chemical comes into contact with ingredients or prepped food, the culinary team must immediately tag the food as "DO NOT CONSUME," discard it entirely without attempting to wash or salvage it, and follow SDS first-aid instructions if exposure occurs.

3.5. Front of House (FOH) Employees

Shall be the one who handles front-facing sanitation chemicals, such as table sanitizers, glass cleaners, and bar disinfectants. Servers, bussers, and bartenders are responsible for ensuring that the chemical spray bottles and buckets used to wipe down guest tables, trays, and bar counters are clearly labeled with the chemical's common name and dilution strength. They must never leave cleaning chemicals sitting on dining tables, bar tops, or next to guest food and food packaging. Like the kitchen staff, FOH employees must keep their personal hygiene products and medications out of the service stations and strictly inside their staff lockers. If a chemical spill occurs in the dining room or bar area, service staff are responsible for immediately cordoning off the area to protect guests , accessing the 24/7 SDS folder , utilizing the spill kit safely , and discarding any guest food or beverage that may have suffered accidental chemical exposure.

3.6. Restaurant and Shift Managers

Shall serve as the direct link between corporate policy and floor execution, driving regulatory compliance, daily workflows, and emergency responses. They shall secure high-strength chemicals in restricted areas for authorized personnel and maintain a 24/7 accessible Safety Data Sheets (SDS) master folder. Daily, the manager shall audit storage to enforce strict physical separation between chemicals and food items, verify secondary containment use, ensure transferred chemicals are accurately labeled with their common name and dilution strength, and prohibit the cross-use of food and chemical vessels. In an emergency, they shall take immediate command to isolate and clean spills using designated kits, quarantine and discard contaminated food labeled "DO NOT CONSUME," and coordinate urgent first aid or emergency services.

4. Storage Protocols

- **Physical Separation:** Chemical must never be stored above, next to, or under food, food packaging, or food -contact surfaces, A dedicated chemical cabinet or room is required.
- **Secondary Containment:** Liquid chemicals should be stored on lower shelves or in spill trays to prevent leaks from dripping down on other items.
- **Access Control:** High-strength chemicals must be kept in a locked area, accessible only to authorized and trained personnel.
- **Personal Items:** Employee medicines and personal hygiene products must be stored in lockers, completely separate from food and professional cleaning supplies.

5. Labeling and Documentation

- **Original Containers:** Chemicals should remain in their original packaging whenever possible.
- **Secondary Labeling:** If a chemical is transferred to a spray bottle or bucket., it must be clearly labeled with the common name of the chemical and its dilution strength.

- **Safety Data Sheet (SDS):** A master folder containing SDS for every chemical on-site must be accessible to all employees 24/7. This is the first thing a doctor or inspector will ask for in an emergency.

6. Handling and Usage

- **Dilution Accuracy:** Necessary employees must follow the manufacturer's instructions for dilution. Too weak, and it won't kill bacteria, too strong, and it becomes a chemical hazard.
- **Personal Protective Equipment (PPE):** Gloves and goggles must be worn as specified by the SDS to prevent chemical burns or skin irritation.
- **No Food Containers:** Never use empty food containers to store chemicals, and never use chemical buckets to store food.

7. Corrective Action

- **Chemical Spill:** In the event of a spill, the area must be cordoned off immediately. Use the "spill kit" as directed by the SDS.
- **Food Contamination:** If a chemical comes into contact with food, the food is considered adulterated. It must be tagged with " DO NOT CONSUME" and discarded immediately. It cannot be washed or salvaged.
- **Ingestion/Exposure:** Follow the first-aid instructions on the SDS immediately and contact emergency services if necessary.

8. Change History

Revision No.:	Revision Date:	Author & Position:	Purpose of Revision
0	February 18, 2026	Marielle Louise Macabale**, QA Specialist**	Originator
1	March 06, 2026	Marielle Louise Macabale**, QA Specialist**	• Change the addressing of personnel; staff members to employees • Added additional signatory; L&D Manager
2	May 25, 2026	Celine Joy Sanchez**, QA Specialist**	• Added Responsibilities
