JIANG NAN 江南	**Approved Supplier Policy**	Document No.:	IKQAP#008
		Revision No.	1
	Imperial Kitchen Group Inc.,	Effective Date:	June 28, 2026

1. Policy Statement

Imperial Kitchen Group Inc., is fundamentally committed to protecting public health and delivering safe, high-quality products to our consumers. Recognizing that food safety begins at the source, it is our strict policy to procure raw materials, ingredients, food-contact packaging, and related services exclusively from approved suppliers who demonstrate an uncompromising commitment to quality and hygiene.

2. Scope

In total alignment with the Food Safety Act of 2013 (Republic Act No. 10611) and the strict regulatory frameworks established by the Philippine Food and Drug Administration (FDA), the company acknowledges its primary responsibility as a Food Business Operator (FBO). To ensure uncompromising food safety, all suppliers must maintain absolute regulatory compliance by providing valid, verifiable documentation, including FDA Licenses to Operate (LTO) and Certificates of Product Registration (CPR). No vendor shall be onboarded without a rigorous risk assessment—ranging from comprehensive document reviews to on-site facility audits—to evaluate the specific biosafety risks of the materials provided. Furthermore, in accordance with the "one step back, one step forward" mandate, we require end-to-end traceability through clear lot coding and batch identification to facilitate rapid recall procedures if necessary. Supplier approval remains a conditional status subject to continuous verification, enforced through mandatory Certificates of Analysis (COA) upon receipt, regular performance evaluations, and strict protocols for rejecting substandard deliveries or delisting non-compliant entities. This policy is binding for all Quality Assurance, Supply Chain Management, and Purchasing personnel; sourcing outside of the Approved Supplier List (ASL) is strictly prohibited and constitutes a critical breach of our corporate food safety protocols.

3. Responsibilities

3.1. Quality Assurance (QA)

Shall be held primary responsibility for the technical evaluation, auditing, and continuous validation of all food suppliers. The QA is tasked with reviewing prospective suppliers' "Supplier Food Safety Questionnaires" against strict FDA standards to assess their pest control, sanitation, allergen management, and recall plans. Furthermore, QA determines the risk classification of materials and executes mandatory on-site facility audits for high-risk items (such as raw meats, dairy, and fresh produce) to verify GMP and sanitation protocols. During the onboarding phase, the QA team strictly verifies physical, chemical, and microbiological parameters against internal specifications by analyzing Certificates of Analysis (COA) for a supplier's first three trial deliveries. On an ongoing basis, QA co-leads the Annual Supplier Performance Review with the Supply Chain Management department, ensuring that any supplier committing critical food safety violations or failing to provide updated FDA documentation is immediately delisted from the Approved Supplier List (ASL).

3.2. Supply Chain Management (SCM)

Shall be responsible for ensuring procurement activities align perfectly with corporate food safety protocols. SCM is strictly prohibited from sourcing materials, ingredients, or food-contact packaging outside of the Approved Supplier List (ASL), as doing so constitutes a critical corporate breach. In terms of continuous oversight, the SCM department co-leads the Annual Supplier

Performance Review alongside Quality Assurance to monitor vendor compliance. They are responsible for ensuring that suppliers proactively submit renewed regulatory documents, such as the FDA License to Operate (LTO) and Certificate of Product Registration (CPR), prior to their expiration to prevent any supply chain or service interruptions.

3.3. Warehouse Receiving Employees

Shall be the frontline defense for food safety by strictly validating delivery parameters against traceability and regulatory standards upon arrival. In alignment with the "one-step-back" protocol, they ensure that all incoming packages and invoices contain explicit lot numbers, batch codes, and production dates. Receiving employees are responsible for scrutinizing every delivery for critical safety factors, including the thermal compliance of perishable goods, transport vehicle cleanliness, and physical package integrity.

3.4. Executive Leadership

The executive leadership, consisting of the QA Manager, Vice President, and President, shall be responsible for the formal governance, review, and authorization of the corporate food safety policy. Through a structured sign-off hierarchy, the QA Manager and Vice President review the policy to guarantee operational alignment between quality expectations and supply chain workflows. Ultimate organizational accountability rests with the President, who officially approves the document, thereby enforcing the policy as a binding corporate mandate to safeguard public health and maintain regulatory compliance with the Food Safety Act of 2013.

4. Regulatory Prerequisites for Suppliers

Before a supplier can be considered for approval, they must demonstrate legal operation and compliance with Philippine food safety regulations. All prospective suppliers must submit valid copies of the following:

- **FDA License to Operate (LTO):** Mandatory for all local manufacturers, distributors, importers, and repackers of food products.
- **Certificate of Product Registration (CPR):** Required for all pre-packaged and processed food ingredients or additives being supplied.
- **Local Government Unit (LGU) Permits:** Sanitary permits and business registrations as required by local health offices.
- **Third-Party Certifications (If applicable):** Proof of adherence to Good Manufacturing Practices (GMP), Hazard Analysis and Critical Control Points (HACCP), or ISO 22000.

5. Supplier Approval Process

Suppliers are classified based on the microbiological, chemical, and physical risks associated with their materials.

- **Step 1: Initial Risk Assessment and Document Review-** Suppliers must complete a "Supplier Food Safety Questionnaire" detailing their pest control, sanitation, recall procedures, and allergen management plans. The Quality Assurance (QA) team will review these documents against FDA standards.
- **Step 2: Supplier Audit**
    - **High-Risk Materials:** (e.g., raw meats, dairy, fresh produce, temperature-controlled items) require an on-site facility audit by the QA team to verify GMP and sanitation protocols before approval.

    - **Low-Risk Materials:** (e.g., ambient packaged dry goods, food-grade packaging) may be approved via a "desk audit" based on their submitted documentation and historical FDA compliance records.
- **Step 3: Trial Deliveries & Certificate of Analysis (COA)-** Upon conditional approval, the supplier must provide a COA for the first three trial deliveries. The QA team will verify that the physical, chemical, and microbiological parameters meet our internal specifications.

6. Traceability and Receiving

In alignment with Section 11 of the Food Safety Act, comprehensive traceability is maintained through a "one-step-back" protocol requiring suppliers to provide explicit lot numbers, batch codes, and production dates on all packaging and invoices. This documentation is strictly validated during receiving inspections, where all deliveries are scrutinized for critical safety parameters, including temperature compliance for perishables, transport vehicle sanitation, and physical package integrity. Consequently, any materials failing to meet these standards—specifically those lacking proper FDA labeling or exhibiting signs of pest infestation, thermal abuse, or contamination—will be immediately rejected to safeguard the integrity of the production chain and ensure total regulatory compliance.

7. Performance Monitoring and Delisting

Maintaining approved supplier status is an ongoing commitment rather than a one-time credential, requiring a comprehensive Annual Supplier Performance Review led by the QA and Supply Chain Management (SCM) departments. This continuous oversight mandates that suppliers proactively submit updated Licenses to Operate (LTO) and Certificates of Product Registration (CPR) before their current documentation expires to avoid service interruptions. Any failure to uphold these standards—including recurring critical food safety violations, unannounced formulation changes, or the suspension of an FDA LTO—will trigger an immediate delisting from the Approved Supplier List (ASL), ensuring our supply chain remains beyond reproach.
