1. Purpose

The primary objective of these guidelines is to regulate visitor entry to ensure that company productivity at Imperial Kitchen Group Inc. remains uncompromised in both quality and quantity. By establishing a structured protocol for the acceptance of guests, the company aims to maintain a secure environment that upholds the safety and well-being of all personnel within the workplace.

2. Scope

This policy applies to all non-employees, including business partners, contractors, government officials, suppliers, and personal guests, governing their conduct from arrival to departure. It regulates access across general, restricted, and highly sensitive facility zones to maintain operational security and protect intellectual property. Furthermore, the scope mandates strict adherence to food safety (QFS) hygiene protocols, occupational safety standards, and confidentiality agreements for both short-term and extended visits.

3. Responsibilities

3.1. Security Personnel

Shall hold a vital role in maintaining the facility's initial line of defense and operational integrity. They are strictly mandated to enforce robust access controls to guarantee that no unauthorized visitors or contractors manage to enter the facility grounds. Beyond managing physical entry, they oversee the initial logistical preparation of guests by providing and distributing mandatory sanitary gear, such as headcaps and disposable masks, which are requested and managed directly at the security post or the main office.

3.2. Restaurant & Shift Managers

Shall be responsible for the direct, hands-on guidance and safety enforcement of visitors within operational zones. They actively guide incoming visitors to ensure full compliance with program regulations, safety protocols, and plant policies. Before and after anyone enters the kitchen areas, Managers perform a strict count, inventory, and approval of all personal effects and carried materials, such as pens and glasses.

3.3. All Employees

Every single employee shall be directly responsible for remaining vigilant and immediately report any observed growing infractions or policy violations to their immediate supervisor to trigger rapid corrective actions.

3.4. Quality Assurance (QA)

Shall be tasked with the comprehensive oversight, monitoring, and verification of safety and quality standards across the facility. They are responsible for monitoring the proper use of assigned visitor lockers and uniforms. Additionally, they maintain a comprehensive monitoring system to track all verification activities, systematically documenting any protocol deviations, equipment inaccuracies, or policy violations. To ensure a verifiable audit trail and drive continuous process improvement, the QA systematically reviews and maintains all associated records, including calibration results, incident logs, and Non-Conformance Reports (NCR).

3.5. Visitors / Contractors

Shall strictly adhere to administrative, health, and hygiene regulations from arrival to departure. Administratively, they are required to complete, sign, and update the Visitor's Logbook immediately upon entering and prior to exiting the facility. From a health standpoint, they must submit to entry health screenings (including temperature checks) and disclose any communicable diseases, infections, or open wounds. Personal hygiene protocols require thorough hand washing

and sanitizing before entry, after using restrooms, or when hands are soiled; spitting, littering, and urinating outside designated restrooms are strictly prohibited.

4. Visitors Policy

To maintain safety and product integrity, all visitors must adhere to the following regulations:

4.1. **Hygiene:** Spitting and urinating are strictly prohibited except in designated restrooms.

4.2. **Tobacco & Consumption:** Smoking is permitted only in designated areas. Eating and drinking are restricted to the canteen; candy, gum, and lozenges are strictly forbidden in production zones.

4.3. **Sanitation:** Littering is prohibited. All waste must be disposed of in designated, covered bins.

4.4. **Health Safety:** Visitors with communicable diseases, open wounds, or infections are barred from entry. Visitors must not conceal any infectious diseases that could jeopardize personnel health or compromise food safety.

4.5. **Security:** Electronic gadgets, including cameras and mobile phones, are strictly prohibited within the production plant. Unauthorized access to the plant is prohibited through strict security measures.

4.6. **Personal Grooming & Attire:** To prevent bacterial or foreign object contamination, jewelry is prohibited in production areas. Fingernails must be kept short, and the use of cosmetics, perfumes, or hairspray is forbidden.

4.7. **Area Precautions:** Shirt pockets must be emptied of loose items (e.g., pencils) before entry. All carried materials are subject to screening for contaminants, and glass or food items of any kind are strictly prohibited in processing zones.

4.8. **Protective Wear:** All visitors must wear head caps, hairnets, and beard/mustache covers. Clean outer garments are required, and visitors must wear socks and change into company-provided footwear.

4.9. **Entry Screening:** Personnel will check visitor health (including body temperature) and inspect clothing for buttons; buttons must be counted before and after entry. Provided lab gowns must be lint-rolled to remove loose fibers and hair.

4.10. **Hygiene & Sanitation:** Visitors must wash and sanitize hands before entry, after using restrooms, or whenever hands become soiled.

4.11. **Facilities & Oversight:** Visitors must use assigned lockers and uniforms, monitored by the QA Department. All visitors are required to sign the Visitor's Logbook and comply with all SSOP, GMP, and plant policies.

4.12. **Reporting:** Every individual is responsible for reporting any gowning or policy violations to the Immediate Supervisor.

5. Monitoring, Corrective Actions for Non-Conformance and Records for Cited Activity

To ensure rigorous adherence to safety and quality standards, a comprehensive monitoring system is established where all verification activities are systematically documented. In the event of any deviation from established protocols—such as equipment inaccuracies or visitor policy violations—immediate Corrective Actions are triggered to mitigate risks and restore compliance. These non-conformances are subjected to a formal root-cause analysis to prevent recurrence, and every step of the resolution process is meticulously detailed in the Non-Conformance Report (NCR) or specific activity logs. All associated records, including calibration results and incident logs, are

maintained and reviewed by the Quality Assurance department to serve as a verifiable audit trail and a basis for continuous process improvement.

6. Documentation and Verification

6.1. Visitors Logbook

6.2. Loose Item Monitoring

6.3. Corrective Action Report
