JIANG NAN 江南	**Records Retention Policy**	Document No.:	IKQAP#016
		Revision No.	1
	Imperial Kitchen Group Inc.,	Effective Date:	June 28, 2026

1. Policy Statement

In strict accordance with the Food Safety Act of 2013 (Republic Act No. 10611), Imperial Kitchen Group Inc., establishes a systematic and legally compliant framework for the creation, maintenance, storage, and secure disposal of all documentation related to our food safety Management System (FSMS). By meticulously retaining records, we ensure comprehensive traceability to rapidly identify the origin and distribution of food products in the event of a food safety incident or recall. The company recognizes that accurate and accessible documentation is the verifiable proof of the company's Good Manufacturing Practices (GMP), Hazard Analysis Critical Control Point (HACCP) execution, and due diligence in protecting the guest/consumer.

2. Scope

This policy applies universally to all personnel, management, and third-party contractors engaged throughout the food distribution and preparation lifecycle at Imperial Kitchen Group Inc,. It governs the comprehensive retention of critical Food Safety Management System (FSMS) documentation across four core categories: traceability and supply chain records (including supplier accreditations, Certificates of Analysis, and batch-specific distribution logs); operational food safety documentation (such as Critical Control Point monitoring, equipment calibration, and sanitation sign-offs); verification and corrective action records (encompassing microbiological laboratory results, internal audits, and CAPA reports); and personnel records (including fit-to-work health clearances and verified competency logs).

3. Responsibilities

3.1. Quality Assurance (QA)

Shall be the primary responsible for the overall maintenance, systematic verification, and execution of the Food Safety Management System (FSMS) framework. The QA must oversee the strict documentation of operational food safety records such as pest control service reports, water potability tests, deep cleaning checklists, and Good Manufacturing Practices (GMP) data, Critical Control Point monitoring, equipment calibration, and sanitation sign-offs—as well as verification and corrective action records like microbiological lab results, internal audits, and CAPA reports. Additionally, QA must ensure that active logs from the first 0 to 6 months are kept organized on-site in a readily accessible binder format for immediate regulatory inspections, and subsequently manage their secure destruction via cross-cut shredding or certified digital deletion when they reach the end of their retention periods.

3.2. Supply Chain Management (SCM)

Shall be responsible for overseeing and enforcing the collection, maintenance, and retention of all supplier and traceability documentation throughout the distribution lifecycle. This category encompasses critical files such as supplier accreditations, Certificates of Analysis (COA), Delivery Receipts (DR), invoices, import permits, and batch-specific distribution logs. They must ensure these vital traceability records are legally retained for either 2 years or the shelf life of the product plus an additional 6 months, whichever duration is longer, to guarantee rapid identification and tracking in the event of a food safety incident or product recall.

3.3. Restaurant and Shift Managers

Shall be the one to handle the day-to-day execution of food preparation and facility maintenance protocols, ensuring all employees and third-party contractors strictly adhere to record-keeping mandates. They are directly responsible for logging daily operations—such as temperature logs, daily prep logs, and chemical dilution logs—which must be reliably retained for 1 year.

3.4. Human Resources (HR) & Learning and Development (L&D)

Shall be mutually responsible for the comprehensive upkeep of all employee-related safety and hygiene data. This category mandates the systematic collection and tracking of employee health clearances, LGU health certificates, verified competency logs, food safety training certifications, and illness reporting logs. HR and training management must ensure these sensitive records are securely stored throughout the individual's entire duration of employment plus an additional 1 year after separation, taking extra care during final disposal to protect private employee health data from unauthorized recovery.

3.4. Executive Leadership

The President and Vice President of the company shall be the one to hold the ultimate authority for reviewing, approving, and legally enforcing this corporate governance framework across the company. Executive leadership ensures that the company remains in strict, continuous compliance with the Food Safety Act of 2013 (Republic Act No. 10611). Their role is to provide the necessary organizational oversight, backing, and resources required to maintain secure physical or cloud-based archival storage systems for records older than 6 months, while mitigating corporate risk by backing high-level incident management trends, regulatory audit reports, and corrective action requests.

4. Standard Retention Schedule

To comply legally with practical storage limitations, the company shall adhere to the following mandated retention timelines:

- **Supplier and Traceability (Delivery Receipts (DR), Invoices, Certificates of Analysis (COA), and Import Permits:** Shall be kept for 2 years or shelf life of product + 6 months, whichever is longer
- **Daily Operations (Temperature Logs, Daily Prep Logs, Chemical Dilution Logs):** Shall be kept for 1 year
- **Sanitation and Maintenance (Pest Control Service Reports, Water Potability Tests, Deep Cleaning Checklists, GMPs):** Shall be kept for 2 years
- **Personnel and Hygiene (LGU Health Certificates, Food Safety Training Certifications, Illness Reporting Logs):** Shall be kept during employment + 1 year
- **Incident Management (Product Recall Logs, Customer Illness Complaints, Regulatory Audit Reports, Corrective Action Requests):** To establish historical compliance trends, these documents shall be kept for 3 years.

5. Storage and Disposal Protocols

- **Active Storage (0-6 Months):** Recent logs must be kept on-site in an organized, readily accessible binder format for immediate review during unannounced LGU or FDA inspections.
- **Archival Storage (6+ Months):** Older records must be transferred to secure, pest-proof, and moisture-proof physical storage or digitized onto a secure, backed-up cloud server
- **Secure Destruction:** Upon reaching the end of their mandated retention period, sensitive documents (especially those containing supplier trade secrets or employee health data) must not be discarded in general waste. They must be permanently destroyed via cross-cut shredding or certified digital deletion to prevent unauthorized data recover
